

Dear Mr. Mamdani,

NYC is lagging behind in tech and the world is changing fast!

Your campaign ran on a vision of a city that works for every New Yorker. But the digital layer underneath that promise is in rough shape.

We are submitting a proposal of 12 recommendations for your consideration on how civic technology could improve the everyday lives of New Yorkers.

We believe the city should:

- 1 Build a Public Internet
- 2 Setup City-owned Payment Rails
- 3 Host Real-time Housing Data
- 4 Improve 311
- 5 Curb AI Expansion
- 6 Provide Free Internet for All
- 7 Add Public Comments on City Bills
- 8 Install Live Budget Tracking
- 9 Establish Office of AI Accountability
- 10 Offer Opt-out to Biometric Surveillance
- 11 Regulate Self-driving Taxis
- 12 Run a Food Rescue Platform

These recommendations came out of an open-format participatory event called *Open Assembly: A Prompt Towards Civic Engagement* held at Index Greenpoint on March 10th, 2026.

We gathered 100 local technologists & experts from leading organizations in the civic technology field including RadicalxChange, Polis, Metagov, Decentral Park and NYC Mesh to dream up what a tech-enabled NYC looks like.

We want to help improve the lives of New Yorkers.
